

Surface Mounted Tactile Paving System

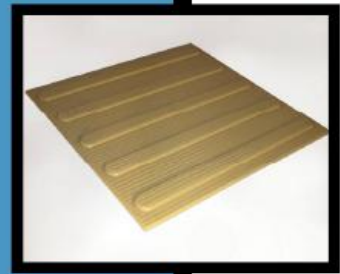

Available in 5 profiles providing full conformity to DfT guidelines for the use of Tactile Paving surfaces.

The TMP Tactile Paving System is quick and easy to install using a two part adhesive. Following recent design developments we now offer a “Moisture Tolerant” adhesive which can be used in wet weather conditions. Together with the existing two part adhesive this ensures customers can fit the TMP Tactile Paving all year round. This is a huge advantage over competitor products.

Each tile weighs only 1kg and at just 5mm thick, are easily shaped to fit any application. Their flexible properties and the ability for the adhesive to be laid as a screed allow the tiles to deal with minor contours and imperfections in the substrate.

All tiles have chamfered edges eliminating trip hazards and have been tested for Slip Resistance.

Further tests have shown that the tiles are seven times harder wearing than concrete alternatives.*

- **Quick & Easy to install**
- **Bonds to existing substrate**
- **NO EXCAVATION**
- **Outperforms concrete**
- **Conforms to DDA 2004 and DfT guidelines**

* Test results available on request
